Accessories:

Video Expansion Box

The Video Expansion Box connects directly to your Virtual Window® 19 and allows for S-Video Input. The Video Expansion Box also controls the stereo modes of the Virtual Window® 19.

If your application is live video, you can directly connect two S-Video cameras into the Video Expansion Box and view them on the Virtual Window® 19 in 3D. You can also control the contrast and brightness for each video signal via the Video Expansion Box.

If you have prerecorded stereo content you can simply plug your DVD player or VHS player into one of the S-Video inputs and view the content on the Virtual Window® 19.
